Education

York University — **Toronto, ON**
Bachelor of Science in Information Technology — *Sep. 2021 - Dec. 2025*

- **Relevant Coursework:** Data Structures, Object-Oriented Programming, Database Systems, Web Development, Systems Analysis and Design, Systems Architecture, Data Science, User Interface Design

Experience

University of Toronto Mississauga — **Mississauga, ON**
IT Data & Systems Analyst — *Jun. 2024 - Apr. 2025*

- Translated **500+ weekly support requests** into actionable reports and trends, helping reduce recurring IT issues and improve service reliability.
- Resolved **250+ ServiceNow tickets** with **98% on-time completion**, supporting stable day-to-day operations for faculty and students.
- Built **Python** automation scripts to monitor performance across **10 labs and 50+ devices**, reducing manual checks and saving staff time.
- Performed system and network analysis that improved uptime by **15%** and reduced latency by **10%**.
- Delivered security and systems guidance to **100+ users**, improving awareness and adoption of IT best practices.

Speedy Transport Group — **Brampton, ON**
Developer Intern — *Aug. 2022 - Apr. 2023*

- Developed **Python**-based automation for logistics data validation with **99% accuracy**, improving data quality for reporting and operations.
- Enhanced shipment-tracking workflows and validation logic, reducing errors by **25%** and enabling faster operational decisions.
- Redesigned database schema and optimized queries, decreasing query time by **20%** for **50+ daily users**.
- Implemented cloud backup and secure access workflows to improve system reliability and reduce risk of data loss.
- Worked cross-functionally with operations stakeholders to prioritize fixes and improve adoption of internal data tools.

Peel Auto Collision — **Brampton, ON**
Data Analyst Intern — *May 2021 - Sep. 2021*

- Standardized and cleaned **1,500+ records**, improving data retrieval speed by **20%**.
- Automated recurring reports with **Python** and **SQL**, reducing report preparation time by **25%**.
- Built an interactive dashboard for repair and inventory tracking, increasing operational visibility for management.
- Supported query tuning, indexing, and backup processes to improve database performance and system reliability.
- Assisted with **MATLAB**-based predictive modeling to support business decision-making and process efficiency.

Projects

CSGO-YOLO | YOLOv5, Python, Computer Vision

- Built a real-time object detection model to classify CS:GO players, applying machine learning to computer vision and live gameplay data.

Minecraft Tree Automation Bot | YOLOv11, Python, Baritone

- Developed a YOLOv11-based detection system to identify trees in Minecraft and integrated it with the Baritone mod for autonomous navigation and tree harvesting.

Music Genre Classifier | TensorFlow, CNN, Python

- Developed a convolutional neural network for music genre classification on raw audio data, achieving **92% validation accuracy**.

Medical Appointment No-Show Predictor | Python, scikit-learn, Streamlit

- Built a machine learning app that analyzes appointment data and predicts patient no-show risk, applying preprocessing, classification, and model evaluation workflows.

JavaFX Music Visualizer | Java, JavaFX

- Built a desktop music player with real-time audio visualizations, combining event-driven programming, UI design, and media playback features.

Technical Skills

Languages: Java, Python, JavaScript, C++, C#, SQL
Frameworks/Libraries: TensorFlow, PyTorch, Node.js, JavaFX, Redux, jQuery
Tools/Platforms: Git, MySQL, MATLAB, Azure, ServiceNow
Concepts: Data Structures, OOP, Unit Testing, Database Design, Cloud Computing, Systems Analysis, Data Visualization
